

Texas Sickle Cell Mortality Data

Background

The Sickle Cell Surveillance Subcommittee sent a request to the Texas Department of State Health Services (DSHS), Center for Health Statistics (CHS), for 2009-2019 Texas sickle cell mortality data in 2021. The subcommittee sent an additional 2020 data request in 2023. CHS prepared data tables, and the CHS Geographic Information Systems (GIS) Team developed maps.

Requests sent:

1. Number of deaths of Texas residents in which sickle cell was the underlying cause of death or a contributing factor (include International Classification of Diseases, Tenth Revision (ICD-10) codes D57.0 Sickle-cell anemia with crisis, D57.1 Sickle-cell anemia without crisis, D57.2 Double heterozygous sickling disorders, and D57.8 Other sickle-cell disorders, but exclude D57.3 Sickle cell trait).
 - A. Breakdown data by year and age group (1-18, 19-29, 30-39, 40-49, 50-59, 60-69, 70-79, 80+ years). Include average age for each age group.
 - B. Breakdown data by year and 11 Texas Public Health Regions (PHRs). Include totals per year and per PHR.
2. Create color-coded maps using PHR data.
